For detailed information on the Admin Menu, refer to *Chapter 5: Using the Admin Menu*, later in this manual.

Figure 3.8 Admin Menu

NOTE:

You can access the Admin menu when the Pocket iQ™ is connected to a vehicle or disconnected.

Navigation

Pocket iQ™ provides two methods of navigating its screens and features. You can make your selections by tapping on the screen with the stylus, or you can use the buttons on the tool itself. Most users will probably use a combination of both.

NOTE:

The procedures documented in this manual will use, for the most part, the stylus method of making selections. You could, however, just as easily use the buttons on the tool.

Tool Buttons

Pocket iQ™ provides a full keypad on the tool itself for navigation and data entry. The following are special navigation buttons.

Keypad	Button Is Used To:
Up Arrow 	Move up an item in a list or on a screen.
Down Arrow 	Move down an item in a list or on a screen.

NOTE:

Screen shots used throughout this guide are for illustrative purposes only. All data shown is fictitious in nature.

Introduction to the Admin Menu

NOTE:

The procedures in this chapter assume that Pocket iQ™ is *not* connected to a vehicle and that a system administrator is performing the procedures in a non-shop setting. It is also assumed that you have an available Internet connection, have previously registered Pocket iQ™, and have activated your software applications. For more information on registering Pocket iQ™, see **Chapter 2: Registration and Software Activation**, earlier in this manual.

When you power up Pocket iQ™, a splash screen is displayed.

After a few moments, the **Home** screen is displayed.

 - Proxy—to view or make changes to proxy settings (see pg. 169).

Connecting to Your Network: Ethernet

Prior to connecting to your local network using an Ethernet connection, you will need to decide how you are going to set up the IP address for Pocket iQ™. There are two choices:

- Dynamic IP Address—Pocket iQ™ automatically selects an IP address
- Static IP Address—you assign an IP address that does not change

NOTE:

Depending on how your local network is set up, *you may* need to make proxy settings (e.g., Domain, Username, and Password) prior to making an Ethernet connection. See ***Managing Proxy Settings for Your Network*** on page 169, later in this manual.

With a Dynamic IP Address

If you want to let Pocket iQ™ automatically assign a dynamic IP address, you need to plug your network cable (i.e., the Ethernet cable you plug into your PC or laptop if you are not running wireless) into the bottom of the Pocket iQ™ device *prior to making your IP settings*.

To connect to the Ethernet network with a dynamic IP address:

- 1 Plug your Ethernet cable into the bottom of the Pocket iQ™ device.

This assumes that the other end of the Ethernet cable is plugged into your network.

- 2 Select **Ethernet** from the Networks screen (Figure 5.22).

NOTE:

Depending on how your local network is set up, *you may* need to make proxy settings (e.g., Domain, Username, and Password) prior to making an Ethernet connection. See ***Managing Proxy Settings for Your Network*** on page 169, later in this manual.

To connect to the Ethernet network with a static IP address:

- 1 Plug your Ethernet cable into the bottom of the Pocket iQ™ device.

This assumes that the other end of the Ethernet cable is plugged into your network.

- 2 Select **Ethernet** from the Networks screen (Figure 5.22).

NOTE:

 To continue, please contact the designated IT person or network administrator for your location for assistance with this task.

Managing Proxy Settings for Your Network

If your local network is configured using a proxy server, you will need to enter information to tell Pocket iQ™ how to communicate with it. If your local network is not configured using a proxy server, you do not need to enter these settings. The default setting on the HTTP Proxy screen is **Bypass**.

NOTE:

It is recommended that you employ the assistance of the designated IT person or network administrator at your location to manage your proxy settings.
